

Reference Number: 50026399

(Senior) Project Manager (m/f/d) E-Mobility Solutions

Location:

Germany, Aachen

Worktime:

Full-time

Tasks

- You manage engineering projects for e-mobility solutions, consisting of propulsion components (e.g. motor, inverter), HV batteries as well as the complete development and system integration of an electrified powertrain
- You have the technical and commercial responsibility for results in the project, including precise tracking of the project's financial situation as well as sustainable and skillful management of additional expenses (change management)
- You design and coordinate the project team, leading the sub-project managers and managing the suppliers by having a very good overview of all technical, financial and personnel issues of the project
- You ensure decision making and take ownership based on meaningful recommendations from sub-project managers
- You are responsible for compliance and continuous improvement of all project relevant processes
- You ensure the necessary coordination and communication with customers, internal departments as well as internal and external project partners
- You conduct management-appropriate reporting and independent escalation of necessary issues
- You evaluate projects regarding their innovation capability and expandability
- Your duty is to conduct project planning during acquisitions and support in the preparation of offers
- You continuously improve and monitor compliance

Qualification

- You have a degree, preferably in the field of electrical engineering, mechanical engineering or mechatronics
- You bring at least three years of relevant professional experience as a project manager (m/f/d), department manager (m/f/d) or an equivalent senior management position
- You are experienced with relevant project management tools and processes
- You also have experience in proactive customer management as well as an entrepreneurial mindset and positive attitude
- Fluency in English and German language skills would be an advantage
- You bring a great passion for project management as well as a strong will to shape things
- You have a strong instinct to identify potential issues and take appropriate action with strong focus
- You excel at clear and binding communication as well as motivation skills
- You have a strong personality with self-confident attitude
- You bring a high degree of flexibility, commitment, and ability to work under pressure
- You understand the particularities of different cultures

with project management processes

- You guide and coordinate project managers of further projects
- You contribute to our R&D roadmap, evaluate e-mobility research activities and steer PhD, BA, MA topics with the aim to leverage synergies with our commercial project landscape
