Aachen, Germany, June 2021 – FEV, a leading global service provider in vehicle and powertrain development, and Wipro, a world leader in information technology, have formed a strategic partnership to develop and market class-leading solutions for next-generation Software Defined Vehicles (SDV).

The intelligent vehicle of tomorrow is software-based, requiring highly potent systems to seamlessly process and manage terabytes of critical data in real time. With the satisfaction and safety of customers on the line, failure is not an option; and with this new alliance between two industry leaders, customers can be confident that the solutions they receive will not only be robust, but benchmark-setting and thoroughly vetted.

At the heart of the partnership is a newly formed innovation lab, which will be used to drive development in the formation of core automotive use-cases, integrated system features, scalable and service-oriented software and E/E architecture – accounting for both global and localized market requirements. Engineered specifically with SDV needs in mind, functionality features such as wireless connectivity and cloud-based computing capabilities will be central development disciplines, as will considerations for accelerated industrialization of SDVs.

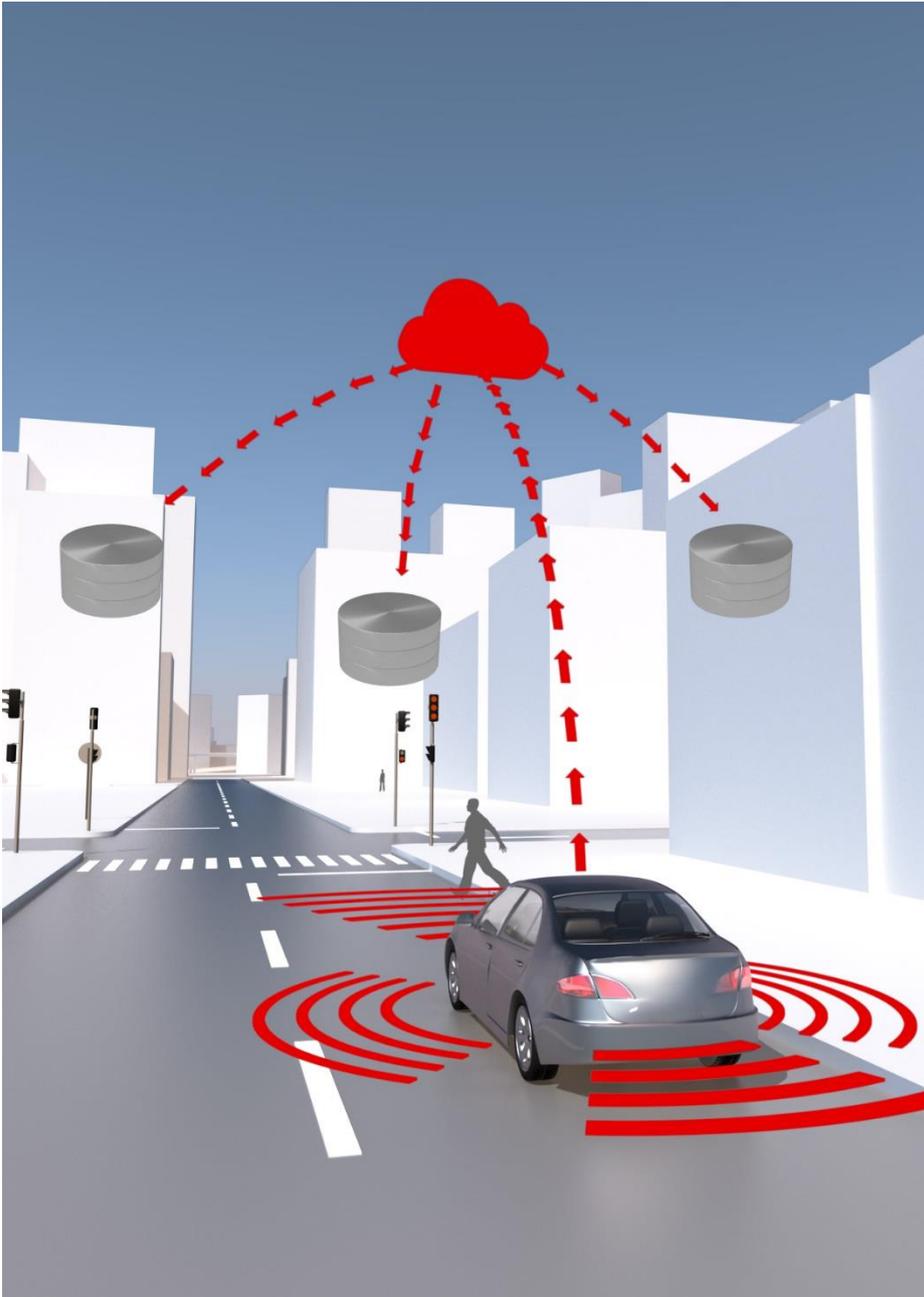

In addition, the two companies will leverage their in-depth know-how to establish a profound software think-tank addressing the

automotive industry's need for serviced-oriented platforms for challenging state-of-the-art mobility features like e.g. automated driving solutions.

“Wipro is a leading global IT company, well known for innovative solutions in the areas cloud and data platforms, VLSI (Very Large Scale Integration), software development and IoT (Internet of Things). We believe that this collaboration will yield breakthrough solutions and innovative products for Software Defined Vehicles,” said Dr. Thomas Hülshorst, Global Vice President Intelligent Mobility & Software at FEV. “By leveraging our respective competencies, we expect to accelerate the product development activities and achieve a significant competitive advantage.”

Thomas Müller, CTO - Engineering and R&D at Wipro Limited, said: “We are excited to collaborate with FEV, one of the most respected names in automotive engineering globally with a wide range of domain and application know-how and profound SW skills, to jointly develop innovative solutions for Software Defined Vehicles. This is a significant step towards strengthening our position in the automotive domain and putting both companies at the forefront of these transformative and converging technologies.”

About FEV

FEV is a leading independent international service provider of vehicle and powertrain development for hardware and software. The range of competencies includes the development and testing of innovative solutions up to series production and all related consulting services. The range of services for vehicle development includes the design of body and chassis, including the fine tuning of overall vehicle attributes such as driving behavior and NVH. FEV also develops innovative lighting systems and solutions for automated driving and connectivity. The electrification activities of powertrains cover powerful battery systems, e-machines and inverters. Additionally, FEV develops highly efficient gasoline and diesel engines, transmissions, EDUs as well as fuel cell

systems and facilitates their integration into vehicles suitable for homologation. Alternative fuels are a further area of development.

The service portfolio is completed by tailor-made test benches and measurement technology, as well as software solutions that allow efficient transfer of the essential development steps of the above-mentioned developments, from the road to the test bench or simulation.

The FEV Group currently employs 6,300 highly qualified specialists in customer-oriented development centers at more than 40 locations on five continents.

About Wipro Limited

Wipro Limited (NYSE: WIT, BSE: 507685, NSE: WIPRO) is a leading global information technology, consulting, and business process services company. Wipro harnesses the power of cognitive computing, hyper-automation, robotics, cloud, analytics, and emerging technologies to help its clients adapt to the digital world and make them successful. A company recognized globally for its comprehensive portfolio of services, strong commitment to sustainability and good corporate citizenship, Wipro has over 190,000 dedicated employees serving clients across six continents. Together with customers, they discover ideas and connect the dots to build a better and bold new future.
