“Zero CO₂ Mobility” – FEV introduces a digital format for its international conference in 2020

Aachen, November 2020 – FEV, an international leader and independent provider in vehicle and powertrain development for hardware and software, is holding its annual international conference, “Zero CO₂ Mobility,” on November 10 and 11, 2020. Leading industry and political experts will discuss the latest trends and innovative solutions for sustainable, clean mobility. Due to the coronavirus, this event has moved to an online-only format.

In the years ahead, the European and global climate policy targets will require massive reductions in CO₂ emissions. The transportation sector and its carbon emissions are a common point of discussion on this subject. “However, there is no unanimous, long-term agreement among the various interest groups to date,” said Professor Stefan Pischinger, President and CEO of the FEV Group and conference sponsor. “This is our starting point as we discuss productive methods of reducing carbon emissions in mobility which are not only adequate for the situation but are also acceptable for the market.”

Electric-only vehicles are very promising when it comes to achieving the targets. “However, additional technologies are needed in order to achieve the planned emission reductions,” said Dr. Norbert W. Alt, COO of FEV Group. “Take, for instance, fuel cells, combustion engines powered by hydrogen or e-Fuels, which are already enabling carbon-neutral operation of current vehicle fleets. If we do not use these technologies, we will not be able to achieve the climate targets set.”

Participants will discuss these and other innovative technologies during the two-day event, which will be held online only. Speakers include Thorsten Herdan (German Federal Ministry for Economic Affairs and Energy), Dr. Sae Hoon Kim (Hyundai), Dr. Stephan Neugebauer (ERTRAC), and Tobias Block (VDA).

Along with the streaming presentations, there will be in-depth Q&A sessions and an exciting live discussion on current developments in the political framework for e-fuels.

About FEV

FEV is a leading independent international service provider of vehicle and powertrain development for hardware and software. The range of competencies includes the development and testing of innovative solutions up to series production and all related consulting services. The range of services for vehicle development includes the design of body and chassis, including the fine tuning of overall vehicle attributes such as driving behavior and NVH. FEV also develops innovative lighting systems and solutions for autonomous driving

and connectivity. The electrification activities of powertrains cover powerful battery systems, e-machines and inverters. Additionally, FEV develops highly efficient gasoline and diesel engines, transmissions, EDUs as well as fuel cell systems and facilitates their integration into vehicles suitable for homologation. Alternative fuels are a further area of development.

The service portfolio is completed by tailor-made test benches and measurement technology, as well as software solutions that allow efficient transfer of the essential development steps of the above-mentioned developments, from the road to the test bench or simulation.

The FEV Group is growing continuously and currently employs 6700 highly qualified specialists in customer-oriented development centers at more than 40 locations on five continents.
